Overview

STAVIO, from Trovex, benefits from over 25 years of design and manufacturing expertise. With a foundation of significant manufacturing capacity and an established supply chain, you can be certain that STAVIO can meet your project demands.

I invite you to explore STAVIO and discover the modern alternative — where doors are not just entrances but statements of style, innovation, and excellence.

David Davis,
Senior Director

Built to last

Our doors, proudly made in the UK, combine cutting-edge design and long-lasting quality.

We have taken our design and manufacturing expertise from the healthcare sector and developed a new approach for social housing, education, and commercial environments. Our doors redefine the standards of durability without compromising on appearance.

STAVIO doors are covered by a lifetime guarantee*

Our values

-  **Reliability**
We are passionate to be consistently good in quality and performance
-  **Competence**
Our knowledge, ability and skill make us successful
-  **Care**
We earn confidence with an impeccable service every time

Kelvin Stevens (left) and David Davis (right)

*Lifetime refers to the length of time that a product could reasonably be expected to maintain its performance.

Innovation

Our team pride themselves on their laser focused approach to innovation. Innovation that benefits the installers and end-users.

Innovation meets practicality with our unique wrap-around frame detail. Unlike traditional installations, our doorsets don't need to be fitted until the end of the project. This not only minimises the chance of damage during on-going building work but also eliminates the need for making good once the doorset is installed.

Once installed, the STAVIO doorset has been designed to be robust and straightforward to maintain. With a continuous easy to clean surface and flush vision panel eliminating easily damaged beading.

Sustainability

Across our business we are continually taking steps to reduce our impact on the environment and enhance our sustainability.

We recognise our responsibility as a manufacturer to design and produce products using materials and processes that minimise the impact of each product across its life cycle. We do this by designing products that are long-lasting and recyclable where possible.

We use technology to reduce the carbon emissions of travel. Colleagues regularly meet online - reducing journeys between sites. Our gas-fired heating systems were replaced by bio-fuel systems which burn renewable fuel further reducing our carbon emissions.

As a manufacturer the production of waste product is unavoidable. We work with a leading waste management partner that ensure 0% of our waste goes to landfill, and is 100% recycled.

Our promise is to never "greenwash" our manufacturing processes or products. All of our claims are evidence based and further information is available on request.

Door range

Discover the STAVIO range of doorsets all available in non-fire, FD30 and FD60 ratings with our innovative frame detail and flush vision panels available as standard.

STAVIO doorsets have been designed to be quick and accurate to install and easy to maintain a like-new appearance throughout the doors lifetime.

Single

Available in NFR, FD30 and FD60. Most commonly used for entrance doors, internal residential doors and risers.

Opening:

Benefits:

- › Standard design
- › Rapid delivery available
- › Easy to install

See colours and finishes on pages 19-20

Leaf-and-a-half

Available in NFR, FD30 and FD60. Most commonly used for public spaces where disabled access is required.

Opening:

Benefits:

- › Simple single door operation
- › Extra width available on demand
- › Easy to install

See colours and finishes on pages 19-20

Double

Available in NFR, FD30 and FD60. Most commonly used for building entrance or corridor doors.

Opening:

Benefits:

- › Maximum opening width
- › Ideal for communal areas
- › Available as double swing

See colours and finishes on pages 19-20

Riser

Available in NFR, FD30 and FD60. Used for secure maintenance access to building services.

Opening:

Benefits:

- › Locked access to services
- › Attractive colours and finishes
- › Robust and durable

See colours and finishes on pages 19-20

Door features

STAVIO doors are supplied as a complete doorset system with a number of unique features which translate to real world benefits.

- 1 Fast to install**
All frames are factory-mitred and bonded for on-site speed and accuracy.
- 2 On-site accuracy**
Frames and doors have precut hinge recesses for ease of installation and on-site accuracy.
- 3 Many colours and finishes**
Entirely PVC encapsulated in a number of colours and finishes.
- 4 Flush vision panels**
Flush triple-glazed glass vision panels are standard on all doors.
- 5 Intumescent seals**
All doors feature not only an intumescent seal but also a cold smoke and acoustic barrier. Fire doors rated to 60 minutes feature additional seals.

Innovative frame

This unique frame design caters for any partition thickness. Carefully and accurately engineered, our frames are factory assembled and ready for fast installation. The end result is that every fixing is concealed with no need for any final finishing or decorating. Using precision CNC's, each frame is manufactured exactly to create a highly durable and robust system.

The standard three-piece frame incorporates an architrave style detail, enabling the existing wall surfaces to be neatly finished by the frame. In this situation, the door closes flush with the architrave.

Ironmongery

A range of tried and tested hardware is stocked that meets the respective robustness of the STAVIO doorsets.

All ironmongery is available in a range of finishes and morticed in the factory to ensure quick and easy installation on site.

For available options please get in touch.

Installation

Designed for quick and accurate installation.

Installation begins by employing our exclusive 3-part split frame detail designed with the fitter in mind. This distinctive feature not only expedites the fitting process but also ensures that our doorsets, complete with pre-morticed ironmongery, arrive on-site ready for swift installation.

Comprehensive illustrated installation guidance is available on request in digital or printed form.
